The Virginin Union University baseball team lost to Hampton Institute in the final disastrous inning of a heartbreaking contest yesterday afternoon. Playing before the largest crowd ever seen on the local campus, the work of seen on the local campus, the work of seen in abounded in brilliant plays, and showed excellent spirit and training. It was a game pleasing to all from the veriest fan down to the smallest urchin until that fatal ninth. Every fan had claimed the game as Union's own again and again, but over in the Hampton lists trouble was brewing. Union had made its lone tally in the first incluse. The restricted and the included the plants.

Chaese Civer on Garden Civer on Gard

It is a valuable posture grass on lands such as I have indicated, where Kentucky blue grass does not do well. Will journey all to make a fall crop of hay on the stubble? Will johnson grass do sound with cowpeas on good land hay? Please reply in The Timespatch. Stokes County, North Carolina: "I bis a valuable posture grass on lands such as I have indicated, where Kentucky blue grass does not do well. Will interfere with the oats? I it make a fall crop of hay on the stubble? Will johnson grass do I sown with cowpeas on good land hay? Please reply in The Timespatch." Johnson grass will problem the winter in Urayse tember, put on ten loads of stable manure an acre, and harrowed in 1,000

It is a valuable posture grass on lands such as I have indicated, where Kentucky blue grass does not do well. Will improve the winter and early spring grazing, as it starts early, and will make as tough a sool as Bermuda, filling up the grass does not do well. Where the winter and early spring grazing, as it starts early, and will make as tough a sool as Bermuda, filling up the grass does not do well. Where the winter and early spring grazing, as it starts early, and will make as tough a sool as Bermuda, filling up the grass does not do well.

Alfalfa Sown Too Late.

Stokes County, North Carolina: "I plowed two acres after oats last September, put on ten loads of stable manure an acre, and harrowed in 1,000

FILE C TWO CILITE ably grow wherever a seed is dropped, and it it stands the winter in Orange you will introduce a veritable nuisance to the neighborhood. Johnson grass can be cut several times during the summer. I have seen it cut four times in Mississippi. But I would never advise its introduction in a section where it has not appeared, because of its great appressiveness. If it survives the winter in Orange, it will spread all over the neighborhood, and I would not introduce it there, though I thus had it is doubtful that it will winter.

and I would not advise the -

### 150% to 200% FERTILIZER FACTS No. 13 PROFIT

Second and Third Applications Accurately kept records have demonstrated for every \$5.00 invested in fertilizers there is a return of from \$12.50 to \$15.00

in increased yields of farm crops. A profit of from 150% to 200% on every dollar invested in fertilizers.

It is an established fact that larger returns can be secured for every dollar invested in this way than any other. The time for putting fertilizers down before planting, is past.

The only way you can secure the maximum yield is by the intercultural method of SECOND and THIRD APPLICA-TIONS of Fertilizers, after the crop is planted. The danger of the plant food leaching out and becoming lost is lessened by making light and frequent applications of 'ertilizers to the growing crops and in this way almost every pound

of plant food is saved. A field thought too poor to make a good crop, is made to double

its yield through the liberal use of fertilizer. The field considered fertile enough without fertilizer is made to pay larger dividends when fertilizer is used, and good fields make better use of heavy applications of fertilizers

than any others. The SECOND and THIRD APPLICATIONS of Fertilizers must be as carefully planned as the first.

These intercultural (SECOND and THIRD) APPLICATIONS must immediately precede cultivation.

They must be put on the level, in front of the cultivator and mixed with the soil if the greatest good is to be secured from Garden vegetables and other truck crops require frequent and

heavy applications of fertilizers to produce paying crops. Experience has taught that the greatest yields of cotton and corn are made through the use of SECOND and THIRD AP-

PLICATIONS of Fertilizers.

Write today for Bulletin No. 4 on SECOND and THIRD AP-PLICATION of Fertilizers-Free on request.
